

Diagnosis & staging

For men diagnosed in England and Wales April 2019 - March 2020:

45,885 men were **diagnosed** with prostate cancer in England and Wales between **1st April 2019 and 31st March 2020**

decrease compared with 52,580 men in 2018-2019*

*this may be explained by the diagnosis of two high-profile celebrities during this previous reporting period, which was publicised by the media

55% of men were **70 years or older**

13% of men presented with **metastatic** disease

Treatment outcomes

For men undergoing surgery in England and Wales between April 2019 - March 2020:

13% of men were **readmitted** within 3 months following surgery

This is stable compared with 2018-2019

For men undergoing radical treatment in 2018:

7% experienced at least one **genitourinary** complication requiring a procedural/surgical intervention within two years after **radical prostatectomy**

11% experienced at least one **gastrointestinal** complication requiring a procedural/surgical intervention within two years after **radical radiotherapy**

Decrease compared to 9% in 2017

Stable compared to 11% in 2017

Treatment allocation

For men diagnosed in Wales April 2019 - March 2020:

Low-risk, localised disease

High-risk/locally advanced disease

10% of men had radical treatments and were **potentially 'over-treated'** **16% in 2018-2019**

40% of men did not have radical treatments and were **potentially 'under-treated'** - **34% in 2018-2019**
